

# Bears and Ladders

A photograph of a brown bear sitting on a red metal structure, which appears to be a ladder or scaffolding. The bear is positioned in the center of the frame, with its front paws resting on the rungs. The structure is made of thick red metal beams and rungs, forming a complex geometric pattern. The background is a plain, light-colored sky. The overall scene suggests a test of a bear's climbing abilities.

**Con:** No climbing harness. No fall protection.

**Pro:** Subject is using multiple points of contact.

A photograph of two brown bears climbing a blue corrugated metal container. The container has a brown metal roof. One bear is higher up, reaching the roof edge, while the other is lower, supporting it. A chain is visible on the side of the container. In the background, there is a white building with windows and some green grass.

**Con:** Subjects need a properly sized ladder. Over-extension of reach beyond balance point.

**Pro:** Good teamwork towards goal.

**Con:** Is this is a GFI circuit? Always seems like fun and games until you get your mouth shocked!

**Pro:** Buddy system is in use. Safety spotter-lookout in the background. But, does he know CPR and first aid?

**Con:** No safety harnesses. Improper footwear. Climbing in tandem

**Pro:** Top bear checking on status of co-worker. Three points of contact at all times.

**Con:** Crew didn't do 360- degree walk around. Crewmember riding in back of truck. Minors not permitted in oil fields.

**Pro:** Checking tail-light bulbs prior to driving.

**Con:** Not a designated walkway.

**Pro:** Avoided slipping on icy pathway below.
